CONTENTS

1 Configuration

3

The account_fr_chorus module allows to send invoices through the [Chorus Pro](#) portal.

If the party is checked for Chorus Pro, all posted customer invoices are queued to be sent. A cron job will send them every 15 minutes by default using the credential from the accounting configuration.

CONFIGURATION

The `account_fr_chorus` module uses the section `account_fr_chorus` to retrieve the path of the SSL certificates.

- `certificate`: the path to the SSL certificate.
- `privatekey`: the path to the SSL private key.

Warning: The private key must be unencrypted.
