<b>1</b>	<b>Carrier</b>	<b>3</b>
<b>2</b>	<b>Carrier Selection</b>	<b>5</b>

The carrier module defines the concept of carrier.

# CHAPTER 1

---

## Carrier

---

A carrier links a party with a product and cost method.

- The *Product* is the carrier service.
- The *Carrier Cost Method* defines how to compute the carrier cost. By default there is only the *Product Price* method which takes the *List Price* of the *Product* as sale price and the *Cost Price* of the *Product* as purchase price.

## CHAPTER 2

---

### Carrier Selection

---

A carrier selection defines the country of origin and destination where a carrier can deliver the products.

- The *Sequence* is used to order the Carrier Selections.
- *Active* allows to disable a Carrier Selection.
- *From Country* defines the Country of origin for this Carrier Selection. Empty value act as a wildcard.
- *To Country* defines the Country of destination for this Carrier Selection. Empty value act as a wildcard.
