Release 5.6

Jan 01, 2020

Contents

1	Country	3
2	Subdivision	5
3	Zip	7
4	Scripts	9

The country module defines the concepts of country and subdivision and comes preloaded with the ISO 3166 list of countries and subdivisions thanks to the pycountry module.

CHAPTER 1

Country

A country is defined by the full name of the country, a code (the ISO country code made of two chars) and the list of subdivisions.

CHAPTER 2

Subdivision

A subdivision is defined by a name, a code and a type (e.g, Capital City, Province, Emirate, etc)

CHAPTER 3

Zip

A zip links a zip code of a country to a city.

CHAPTER 4

Scripts

There are two scripts:

- *trytond_import_countries* to create and update countries and subdivisions from the ISO database.
- *trytond_import_zip* to create zips by country from the geonames database.
