trytond$_l$dap$_a$uthenticationDocumentation

Release latest

May 07, 2020

Contents

The LDAP authentication module allows to authenticate users via a LDAP server.

The configuration of the LDAP connection is set in the *ldap_authentication* section.

To be activated, the *ldap* method must be added to the *authentications* methods list of the *session* section of the configuration.

Configuration

1.1 uri

The LDAP URL to use to connect to the server following the RFC-2255.

1.2 bind_pass

The LDAP password used to bind if needed.

1.3 uid

The UID Attribute for authentication (default is *uid*).

1.4 create_user

A boolean to create user if not in the database.
