1.4 image_timeout .................................................... 3

2 Design 5
2.1 Product Image .................................................... 5
The *Product Image Module* adds images to each product and variant.
The Product Image Module uses some settings from the [product] section of the configuration file.

1.1 image_filestore

This configuration value indicates whether the image should be stored in the trytond.filestore (True) or the database (False).

The default value is: False

1.2 image_prefix

This is the prefix to use with the trytond.filestore. This value is only used when the image_filestore setting is in use.

The default value is: None

1.3 image_base

The base URL for the images, without the path.

The default value is generated from the hostname configuration setting.

1.4 image_timeout

The maximum time in seconds that the image can be stored in cache.

The default value is: \( 365 \times 24 \times 60 \times 60 \) (1 year)
The *Product Image module* introduces some new concepts.

### 2.1 Product Image

The *Product Image* concept store images for a *Product*. The images are stored as *JPEGs* format and with a maximal horizontal and vertical size of 2048 pixels.
