Release 5.6

Mar 03, 2021

Contents

1	Work Effort	3
2	Work Status	5

The Project module provides the concepts of project and task and the basis for simple project management.

CHAPTER 1

Work Effort

The Work Effort model is used for creating both projects and tasks. This allows for instance to transform a task into a project if it gets bigger and need to be split. The following fields are defined on the model:

- Name: The name of the Project/Task.
- Type: Can be *Project* or *Task*.
- Status: The current status of the work.
- Parent and Children: Define the tree structure of projects and tasks.
- Party and Party Address: The optional party (and the contact address) for which the project is made. Available on projects.
- Timesheet, start and end: Allow to enter timesheet for this work.
- Effort: The estimated effort of a task.
- Total Effort: Available on projects. Gives the total effort of the sub-tasks (I.E. tasks of the project and tasks of the sub-projects) of the current project.
- Progress: The progression on the task.
- Total Progress: Gives the total of progress of the sub-tasks.
- Comment: A description.

CHAPTER 2

Work Status

The Work Status defines the possible status of projects and tasks. A minimal progress can be defined to enforce on works in this status.
