The sale amendment module allows you to change sales that are being processed and keep track of the changes. An amendment is composed of action lines which can:

• Recompute taxes (if the customer tax rules or product taxes have changed).
• Change the payment term
• Change parties and addresses
• Change the warehouse
• Change a sale line:
  – the product (for one with the same UoM category)
  – the quantity and unit of measure
  – the unit price
  – the description

When the amendment is validated the sale is updated and given a new revision. Generated documents (like shipments and invoices) that are still in a draft state are replaced with new ones based on the new values.
