 - 1.3 Sale 3
 - 1.4 Stock Move 4

- 2 Usage 5**
 - 2.1 Selling gift cards 5
 - 2.2 Redeeming gift card 5

The *Sale Gift Card Module* manages the selling and redeeming of gift cards.

The *Sale Gift Card Module* introduces or extends the following concepts.

1.1 Product

When the *Sale Gift Card Module* is activated, services and goods can be defined as gift cards.

See also:

The [Product](#) concept is introduced by the [Product Module](#).

1.2 Gift Card

The *Gift Card* concept stores the unique number and value for each gift card.

See also:

Gift cards can be seen by opening the main menu item:

Sales → Gift Cards

1.3 Sale

The *Sale* concept is extended to allow *Gift Cards* presented by customers to be redeemed. On quotation these gift cards are deducted from the total.

For *Sale Lines* that are for gift cards represented by service products an optional email address can be provided. This email address is then used to send the gift card to the customer by email.

See also:

The [Sale](#) concept is introduced by the [Sale Module](#).

1.4 Stock Move

The *Stock Move* concept is extended to record the *Gift Cards* shipped to customers.

See also:

The *Move* concept is introduced by the *Stock Module*.

2.1 Selling gift cards

A gift card *Product* can sold on a *Sale*. When it is a service, the *Gift Card* are created and sent automatically by email to the email address from the sale line or, if this has not been filled in, to the customer's email address. When the *Product* is goods, the *Gift Cards* must be linked to the outgoing *Stock Moves* that send the gift card to the customer.

2.2 Redeeming gift card

Existing *Gift Cards* can be added once to a *Sale*. On quotation, a return line for the amount of each gift card is created.

Note: If the value of the redeemed gift cards exceeds the value of the sale then the sales total will be negative. This will normally result in a credit note being generated by the sale instead of an *Invoice*.
