Release 5.8

Jan 01, 2020

Contents

The Sale Supply Production module adds a “supply on sale” option to producible products. If checked, it will generate a production request for each sale line of this product regardless of the stock levels. Once the products are produced they are assigned to the customer shipments. If the production request is cancelled, the sale goes back to the default supply method.

Warning: If the shipment method is *On Invoice Paid*, the production request will be created only when all the invoice lines are paid.
