CONTENTS

1	Design	3
1.1	MyGLS Credential	3
1.2	Carrier	3

The *Stock Package Shipping MyGLS Module* allows package labels to be generated for shipments using [MyGLS](#) web-services.

The *Stock Package Shipping MyGLS Module* introduces or extends the following concepts.

1.1 MyGLS Credential

This is used to store the credentials needed to connect to the MyGLS API.

See also:

The credentials can be accessed from the main menu item:

Carrier → Configuration → MyGLS Credentials

1.2 Carrier

When the *Stock Package Shipping MyGLS Module* is activated, carriers gain some extra properties. These include a new shipping server “MyGLS”, printer configuration and services.

See also:

The Carrier concept is introduced by the [Carrier Module](#).
