The *Stock Quantity Early Planning Module* helps reducing stock level by proposing to consume earlier.

1.1 Generate stock quantity early planning

You can run the wizard *Generate Stock Quantity Early Planning* at any time to calculate or update the planning.

The *Stock Quantity Early Planning* introduces the following concepts:

2.1 Stock Quantity Early Plan

Quantity Early Plannings are generated by the *wizard* of the same name. They represent possible planning optimisation regarding the quantity of stock available for future *Shipments*, *Productions* or *Outgoing Moves*.

Possible early dates are calculated for the planning. Ignoring the proposal makes that the system will no more create proposal for the origin.

The *Employee* who processes, closes or ignores the planning is recorded.

Quantity Early Planning can be found by opening the main menu item:

Inventory & Stock → *Quantity Early Planning*

2.1.1 Wizards

Generate Stock Quantity Early Planning

The *Generate Stock Quantity Early Plannings* wizard creates for each warehouse the *Stock Quantity Early Plans* if there are possibilities. When running it deletes any open plans, updates the processing and plans with new moves and create new plans.
